

THE CONCEPT

Designed, developed and marketed by the French company Scuba Converged Systems for its global partners including Airande, MANOA is a brand of disinfection products for hands, objects and air using its UV-C technology.

Unlike UV-A and UV-B rays, UV-C rays do not penetrate the dermis (skin). By respecting the conditions of power and exposure time, UV-C rays remain germicidal and eliminate 99.99% of viruses, bacteria and microbes without presenting any danger to the skin.

BENEFITS

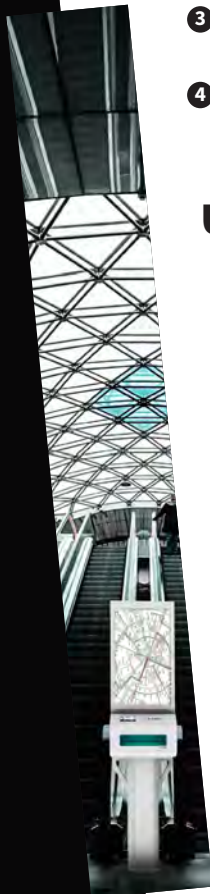

Apart from its disinfecting power, the method of disinfection by ultraviolet radiation has many other advantages..

Economic : No more stock of products, no more waste, less purchasing cost The operation of UV lamps varies between 15 and 30 W which represents low power consumption.

Ecological : UV disinfection is a physical process that does not use any chemicals and leaves no residue; No more gel that spreads everywhere! Certainty of perfect disinfection of your hands.

Secure : Ultraviolet C radiation does not present any risk to the health of persons present in the premises. It guarantees compliance with hygiene standards and barrier gestures, the device is designed to limit direct vision with UVC.

Communicating : 5" touchscreen to customize your settings and deliver your messages. Audio information of operations and alerts (messages and beep).
