

PLIWA Derm V

PLIWA Derm V is an alcohol skin and hand disinfectant

PLIWA Derm V is an alcoholic (2-propanol v/v) skin and hand disinfectant with short exposure time without cumulative long term active ingredients.

Instructions for Use

Areas of Application

- Ideally used for:
 - Hygienic and surgical hand disinfection
 - Skin disinfection prior to simple injections and puncture of peripheral vessels,
 - Skin disinfection before surgery and before punctures of joints,
 - Disinfection of skin rich in sebum glands,
 - Cooling compresses.

Contraindications

2-Propanol 70% (v/v) is not intended for disinfection of open wounds.

Product Attributes

Composition:

- Active ingredient: 2-propanol: 63.1 g
- Other ingredients: purified water up to 100.0 g

Characteristics:

- Appearance: clear liquid
- Density at 20°C: 0.875-0.878
- Solubility in water: miscible
- Flashpoint according to DIN 51 755: 22°C
- PLIWA Derm complies with the EU regulations of the current pharmacopoeia with regard to "acidic and alkaline treating substances"

Shelf Life:

- The shelf life of PLIWA Derm is indicated on the container/label. After opening, the skin and hand disinfectant can be used for 6 months. (see over page).

Warning

Highly flammable! Keep away from sources of ignition. Do not smoke! Store tightly closed. If the solution is spilled, immediate fire and explosion precautions must be taken. Suitable measures include, for example, collecting the spilled liquid and diluting it with water, ventilating the room, and removing ignition sources. **Flashpoint 18°C.**

Store medicinal products out of the reach of children.

Instruction for Dosage and Type of Application

- For hygienic hand disinfection, the hands are rubbed with the solution and kept moist for 30 seconds.
- For surgical hand disinfection, hands and forearms are rubbed with the solution and kept moist for 3 minutes.
- For disinfection prior to simple injections and punctures of peripheral vessels, the skin is carefully rubbed with the solution and kept moist for 15 seconds.
- For disinfection before operations and before puncturing joints, the skin is thoroughly rubbed with the solution and kept moist for 1 minute.
- For disinfection of skin rich in sebum glands, the skin is thoroughly rubbed with the solution and kept moist for 10 minutes.
- For preparation of cold compresses, the solution is to be diluted with equal amounts of water.

Advice

The times given above are minimum times. Depending on the additional difficulties (e.g., damp skin, soiling of the skin, risk of the surgery), the exposure times must be extended. 2-Propanol 70% (V/V) has no sporicidal activity and is therefore not suitable for storing sterile instruments and syringes. If you have any questions about the application, please contact your doctor or pharmacist.

Adverse Reactions

Rubbing the skin with 2-propanol 70% (V/V) can cause reddening and a slight burning sensation.

Reporting of adverse reactions

If you observe any adverse reactions, talk to your doctor or pharmacist. This also applies for adverse reactions not mentioned in this leaflet. You can also report adverse reactions directly to your country's agency that is responsible for the regulation of disinfectants. By reporting adverse reactions you can help provide more information on the safety of this medicinal product.
